

Long Earths

Long Blues

Long Blues are generally 8mtr in length, however any length can be provided if required.

Although an S9B to J117-D configuration is standard, Long Blues can also be supplied with CE62 Clamps.

Interlocked Earths

Interlocked earths provide the same connections as a regular Long Blue, however the Clamps utilised a lock-and-key system where the Earth end is removed using the Line end.

This ensures that Engineers do not accidentally disrupt the path to earth prematurely.

Line end clamps are available in an S9B style or CE5 style.
