

Short Circuiting Straps

PBWEL supply various Short Earths to the Rail industry ranging from 1.5mtr Short Orange Earths to Blue Jumpers.

Short Circuiting Straps are used to short the positive and negative circuit of a D.C Feeder section. Each Strap consists of three J117-NSE clamps fitted with flexible Copper leads.

The body of the J117-NSE has an insulating shield to prevent welding to the Rail in the event of a Fault Current. Clamps are suitable for fitting to both Bull-Head and Flat Bottomed rails, and use a hardened Steel tip to penetrate corrosion.

Bonds of various lengths can also be provided if required.
